

IEC61000-4-30 Ed. 3 Class S

Now IEC61000-4-30 Ed. 3 Class A compliant!\*

# Investigate power characteristics and analyze the causes of problems

Exceptional ease of use and international standard-compliant reliability

- Extensive statistical analysis
- EN50160
- IEEE519 TDD

# Maintain and manage power supplies and analyze problems more easily and reliably than ever before

## **POWER QUALITY ANALYZER PQ3198 and PQ3100**

The critical importance of electrical power in today's society necessitates daily maintenance and management to ensure that problems don't occur. When they do, for example due to an equipment failure or abrupt surge in demand, engineers face the need to analyze the cause quickly.

The POWER QUALITY ANALYZER PQ3198 and PQ3100 provide robust support for field personnel who need to analyze power characteristics in the form of measurement capabilities that reliably captures the full range of power anomalies and exceptional ease of use throughout the entire user experience, from connecting the instrument to recording data.

IEC 61000-4-30 Ed. 3 compliant

IEC61000-4-30 is an international standard that specifies methods for measuring power supply quality, Equipment certified as complying with this standard provides reliable and repeatable measurement results.

#### **Analyze equipment power problems**

Capture the full range of power supply anomalies, including momentary interruptions, voltage drops, and frequency fluctuations, while recording trends to help investigate the causes of unexpected equipment malfunctions and sudden stoppages.

#### Record quality data for power systems

Record fluctuations in voltage, current, power, harmonics, and flicker when connecting a highly variable system such as a renewable energy source or EV charging station to the grid. Easily analyze the data with the included PQ ONE software.

#### **Measure AC/DC power**

Use AC/DC auto-zero current sensors to measure DC current accurately over extended periods of time. Since the sensors are powered by the instrument, there's no need to set up a separate power supply.

#### High-end model

## Troubleshoot power supplies and verify power quality

# **PQ3198**

#### Applications

Investigate power supply anomalies

Investigate the causes of equipment failures and malfunctions, including issues that are difficult to identify, such as when a device causes a properly-functioning piece of equipment that is connected to the same power outlet to experience a voltage drop.

Verify the quality of power from a solar power system

Check fluctuations in the output voltage of a power conditioner in a solar power system along with flicker and transient voltages. You can also measure fluctuations in the frequency of the grid interconnection and fluctuations in the harmonic voltage and current components of the system's output.

Verify the quality of power supplied by an EV rapid charger

Since the PQ3198's fourth voltage channel is isolated from its first three voltage channels, the instrument can measure power and efficiency across two separate circuits. For example, you can verify the quality of the input (AC) and output (DC) of an EV rapid charger while simultaneously measuring power and efficiency between input and output.

#### High-precision, wideband, broad-dynamic-range measurement

The PQ3198 delivers the high-end specifications and high reliability needed to capture the full range of power anomalies and analyze the underlying data with a high degree of precision.

#### International standard IEC 61000-4-30 Ed. 3 Class A compliant

The PQ3198 complies with the IEC 61000-4-30 Ed. 3 Class A standard. As a result, it can perform standard-mandated measurement tasks such as gapless, continuous calculation; detection of events such as swells, dips, and interruptions; and time synchronization using GPS (optional).

#### Basic measurement accuracy (50/60 Hz)

Voltage	±0.1% of nominal voltage
Current	±0.1% rdg. ±0.1% f.s. + current sensor accuracy
Power	±0.2% rdg. ±0.1% f.s. + current sensor accuracy
Frequency	200ms: ±0.02Hz / 10s: ±0.003Hz

Thanks to basic measurement accuracy that is among the best of any instrument in the industry, the PQ3198 offers high-precision measurement without the need to switch voltage ranges.

#### Class A

Part of the IEC 61000-4-30 international standard, Class A defines power quality parameters, accuracy, and standard compliance to facilitate the comparison and discussion of measurement results from different instruments.

#### High-voltage, wideband performance

The PQ3198 can measure transient voltages of up to 6000 V lasting as little as 0.5 µs (2 MS/s). It can also measure high-order harmonic components from 2 kHz to 80 kHz. As inverters enter into widespread use, malfunctions and failures in that frequency band are becoming more common.

#### Voltage measurement range

The PQ3198 can measure voltages of all magnitudes using a single range.

#### Voltage frequency band

The PQ3198's wideband capability extends from DC voltages to 700 kHz.

#### Two-circuit measurement

Since the PQ3198's fourth voltage channel is isolated from its first three voltage channels, the instrument can measure power and efficiency across two separate circuits.

#### **Applications**

- Simultaneous measurement/monitoring of the primary (AC) and secondary (DC) sides of an EV rapid charger
- Simultaneous measurement/monitoring of the primary (DC) and secondary (AC) sides of a solar power system
- Simultaneous measurement of the primary (DC) and secondary (AC) sides of a DC/AC (3-phase) inverter
- Simultaneous measurement of the primary and secondary sides of a UPS
- Simultaneous measurement of power supply (AC) and control (DC) circuits
- Simultaneous measurement of a 3-phase line and a ground line
- Simultaneous measurement of a neutral line to detect ground \*For DC measurement, an AC/DC Auto-Zero Current Sensor is required

400 Hz line measurement

Voltage channels

1, 2, and 3

In addition to 50/60 Hz, the PQ3198 can measure a line frequency of 400 Hz.

Voltage

channel 4

#### Simple inverter measurement

The PQ3198 can measure the secondary side of inverters with a fundamental frequency of 40 to 70 Hz and a carrier frequency of up to 20 kHz. It can also measure the efficiency of DC/3-phase inverters.

#### GPS time synchronization

The GPS OPTION PW9005 can be used to correct the instrument's internal time to UTC standard time. This capability eliminates any time difference between instruments to allow analysis that preserves the simultaneity of phenomena measured with multiple instruments.

Mid-range model

# Investigate power supply conditions and prevent problems

# PQ3100

#### Features

Applications

Investigate power supply conditions

Measure voltage fluctuations, equipment capacity, and harmonics before installing new electrical equipment. You can also check whether newly installed equipment is affecting other equipment by repeating those measurements after installation comparing the results.

Prevent power supply problems

Discover signs of impending problems by repeatedly measuring a component such as an elevator motor on a regular basis. Flexible current sensors make it possible to connect the instrument safely and easily, even in difficult settings involving double wiring, busbars, and crowded distribution boards.

Perform load rejection testing of solar power systems

In load rejection testing, it's necessary to record transient changes in current and voltage when the system is taken offline. The PQ3100 can record anomalous waveforms for up to 11 seconds (1 second before and 10 after each event). Cursor measurement lets you verify peak values and duration as

#### QUICK SET: Easy-to-understand measurement guidance

Launch QUICK SET to navigate the connection and setup processes so you can get started recording quickly.

#### Setting up the instrument

(example: 2-meter power measurement of a 3-phase/3-wire circuit)

Choose the connection type and connect the cables to the instrument

Connect the voltage cables and current sensors to the circuit to be measured

The instrument will perform an automatic wiring check and display the results.

For example, you won't be able to measure power or power factor accurately if the clamp is oriented incorrectly.

You need only set the recording parameters and interval in order to start measurement. Recording parameters can be set simply by choosing a simple setup preset. (See page 8 for details.)

#### Recording of 11 sec. before and after events

The PQ3100 can record waveforms for up to 1 second before an anomaly and 10 seconds after. This capability is useful when you need to analyze waveforms before and after an anomaly, perform load rejection testing of a solar power conditioner, or verify that a piece of equipment has returned to normal operation.

#### Up to 8 hours of battery operation

The PQ3100 features an energy-saving design and a longlasting battery. The bundled rechargeable battery lets you continue measurement in the event of a power outage or take the instrument into the field to make measurements in locations where AC power is not available.

 Outdoors During power outages

Extended

#### Display of event statistics

Check the number of times each type of event has occurred as well as the worst value for each.

#### Demand recording

Record power consumption over time.

Measurement functionality and data recording capabilities that ensure you'll capture the full picture with a single measurement

#### Capture power anomalies reliably with simple settings

The PQ3198 and PQ3100 can measure all parameters at once, including power, harmonics, and anomaly waveforms. The instruments also provide simple setup functionality for automatically configuring recording parameters for popular applications.

Extensive event parameters

Simple, one-touch setup

#### Capture power supply anomalies reliably

#### Transient voltages

Capture phenomena characterized by precipitous voltage changes and high peak values caused by lightning or circuit breaker or relay contact issues or tripping.

#### Voltage swells

Capture phenomena characterized by a momentary rise in voltage, for example due to lightning or power line switching.

#### Voltage dips

Capture phenomena characterized by a short-duration drop in voltage when a large inrush current occurs, for example due to motor startup.

#### Interruptions

Capture phenomena characterized by a stoppage in the supply of power, for example when lightning interrupts power or when a power supply shortcircuit trips a circuit breaker.

#### Frequency fluctuations

Capture frequency fluctuations caused when generator operation becomes unstable due to an abrupt increase or decrease in load.

#### Simple, one-touch setup

## Simple setup functionality for simplified configuration of recording parameters

Simply choose the preset that suits your application, and the instrument will automatically configure the recording parameters.

EN 50160

Capture voltage and frequency anomalies.

Augment the voltage anomaly detection preset by capturing current and harmonic anomalies as well.

Capture inrush current.

Record only time-series data.

Perform measurement based on the EN 50160 standard.

\*1: PQ3198 only. \*2: This feature is known as "Trends only" for the PQ3100.

#### Automatic sensor detection to avoid erroneous measurement

Simply connect current sensors, touch "Sensor" on the screen, and the instrument will automatically detect sensor types and

#### Inrush current

Capture phenomena characterized by a large current that flows momentarily when a device starts up upon receiving power, for example electric equipment and motors.

#### Harmonics

Capture phenomena characterized by distortions in voltage and current waveforms that are caused by semiconductor control devices

#### High-order harmonics

Capture phenomena characterized by distortions in voltage and current waveforms caused by noise components from semiconductor control devices such as those used in electronic device power supplies.

#### Unbalance

Observe voltage and current waveform distortion, voltage dips, and negative-phase-sequence voltage that occur when the loads connected to individual phases in a 3-phase power supply change or when unstable equipment operation increases the load on a specific phase.

#### Easy-to-understand display of parameters

Since you can switch the display to show all measurement parameters while measurement is underway, it's easy to check conditions. \*Screenshot shows the PQ3100 display.

RMS values

Vectors

#### Simultaneously record event waveforms and trend graphs

Each time it makes a measurement, the PQ3198/PQ3100 records trend data for all parameters. When a power anomaly is detected, an event is recorded. Since the instrument records the maximum, minimum, and average values during the interval, you can rest assured that you won't miss peak values.

Extensive range of recording parameters

Example: Voltage dip

Simultaneous recording of waveforms and trend data

#### Event waveform

When an event occurs, the instrument records the instantaneous waveform for 0.2 seconds. Triggers can be set for all event parameters in parallel, and you can check recorded data on the display while measurement is in progress.

#### 30 sec. event fluctuation trend data

When a voltage swell, dip, or inrush current event occurs, the PQ3198/PQ3100 can simultaneously record 1/2 RMS value fluctuations for 30 seconds.

#### Flicker

The PQ3198/PQ3100 can simultaneously measure and record three channels of  $\Delta V10$  or IEC flicker.

#### Δ-Y, Y-Δ conversion function

When measuring a 3-phase/3-wire (3P3W3M) circuit or a 3-phase/4-wire circuit, the PQ3198/ PQ3100 can switch between phase voltage and line voltage without changing the voltage connections.

# Designed to accommodate every possible application so that it's easy to use in all field settings

#### Clamp sensors for every application

## Flexible sensors: Easy installation in confined locations

Flexible current sensors provide a convenient way to measure double- and triple-wired power supplies and in confined locations, with capacities of up to 6000 A.

#### No need for an external power supply

Since sensor power is supplied by the instrument, there's no need for an AC adapter when using AC/DC sensors or flexible sensors.

# Auto-zero sensors: Stable measurement of DC power over extended periods of time

Auto-zero current sensors allow measurement of DC power over extended periods of time, eliminating the need to concern yourself with zero-point drift.

#### Wide array of ranges to accommodate all applications

Use HIOKI sensors in an array of applications to measure equipment ranging from the secondary side of CTs to high-current wiring. The CT7136 offers three ranges\* (5 A/50 A/500 A), as do HIOKI's flexible sensors (50 A/500 A/5000 A). Since the effective measurement range extends to 120% of the nominal range, flexible sensors can be used to measure currents of up to 6000 A. \*PQ3100 (PQ3198: 2 ranges [50 A/500 A]).

Delivering both safety and high accuracy

#### Exceptional safety

The PQ3100 supports CAT III (1000 V\*) and CAT IV (600 V) situations, so it can safely measure service drops and distribution panels with a terminal-to-ground voltage of up to 1000 V. \*PQ3100 only (PQ3198: CAT IV [600 V]).

#### High accuracy

The PQ3198 complies with IEC 61000-4-30 Ed. 3 Class A, and the PQ3100 with IEC 61000-4-30 Class S, ensuring both instruments' ability to deliver highly reliable, high-precision measurement.

	PQ3198	PQ3100
Voltage RMS value accuracy	±0.1% of nominal voltage	±0.2% of nominal voltage
Swell/dip/interruption	±0.2% of nominal voltage	±0.3% of nominal voltage

#### Convenient tools

#### When it's hard to clip leads to terminals

In locations where it's hard to attach alligator clip-style leads to metal terminals, you can replace the tips of the voltage cords with magnetic adapters so that you can more easily detect the voltage.

Magnetic adapters are easy to affix to terminals in confined locations.

## Secure the PQA to the side of a distribution panel

Use two heavy-duty magnetic straps to attach the instrument to the side or door of a distribution panel.

Magnetic straps can also be used to help keep voltage cords from coming loose.

#### Extensive range of interfaces

#### Remote control via Ethernet

Use the PQ3198/PQ3100's HTTP server function to configure and monitor the instrument from a browser. You can also download data using the instrument's FTP server function.

#### Email notification function\*

The instrument can send emails when an event occurs or at a regular time every day. \*PQ3100 only

Magnetic design

(diameter: 11 mm)

Magnetic adapters Red: 9804-01

Black: 9804-02

#### Transfer data to a logger wirelessly\*

Pair a data logger (that supports LR8410 Link) to the instrument via Bluetooth® wireless technology to transfer measured values for up to six parameters to the logger. In this way, you can use a single data logger to aggregate measurement data from multiple locations.

\*PQ3100 only. Connection requires a serial-Bluetooth® wireless technology conversion adapter as recommended by HIOKI. Please contact your HIOKI distributor for more information.

#### Extended recording times supports permanent installation

#### Extended recording to an SD memory card

The PQ3198/PQ3100 can record time-series data and event waveforms to an SD memory card. Choose from 2 GB and 8 GB cards.

#### PQ3198 recording times (when using a 2 GB SD card)

Recording interval	All parameters	Power and harmonics	Power only	Event recording

# Analyze data and generate reports with HIOKI's PQ ONE power quality analysis software

Standard accessory

Download the latest version from HIOKI's website for free. Sample data from actual instruments is also available for download.

#### Loading measurement data Review multiple data sets at a glance

Group data from different measurement locations, times, and dates into folders and view them together.

#### **PQ Check function**

Automatically check data to see if it complies with power quality standards. (Thresholds can be customized.)

Toggle the display between event counts and worst values.

Display event status and other information in the list of loaded data.

# PASS/FAIL judgments for the standard

Understand at a glance that the flicker value falls outside the standard.

Output FAIL (noncompliant) data with a single click using the Quick Report function.

### Simple report creation Quick Report function

Group together trend graphs for multiple data sets and output them as a report. This feature is useful when you wish to compare dates from a repeat recording run or data from multiple locations.

#### Detailed analysis Display a list of analytical data

Display detailed measurement data, including event statistics, an event list, and event graphs. Simply choose the parameters you need to output to the report.

#### PQ ONE main screen Display a list of detailed information for an individual data set

- Select data to load
  - Load a new data set or choose the most recently used data set.
- 2 Option settings

Configure options such as display parameters, language, and cache files.

Verify settings at the time of measurement

Display the status screen with information such as the instrument settings that were in effect at the time of measurement.

4 Report creation

Generate detailed reports with trend and event information.

5 CSV file conversion

Output trends and event waveforms as a CSV-format file.

6 Statistical values and standard values Display statistical values and perform evaluations and analysis based on standards. User manual and version information

Review the PQ ONE user manual and software version.

8 Measured value trend graph

Zoom in and out or use the cursor to display measured values.

9 Trend graph display interval

Set the interval for which to display trend data on the screen.

10 Event statistics and ITIC curve

Display bar graphs with data such as the number of events that occurred.

Event list

Display information including the event type, time, duration, and channel.

12 Detailed event data

Display detailed information about the event selected in the event list

#### Features shared by the PQ3198 and PQ3100

# Analyze data and generate reports with PQ ONE power quality analysis software

#### Examples of the types of analyses that can be performed with PQ ONE

#### Event statistics

Display statistics about events by date or time. This feature makes it easy to discover anomalies that occur at particular times of day or on particular days of the week. In addition, you can perform ITIC (CBEMA) curve analyses (using tolerance curves), which are used by power quality management standards in the U.S.

Date-based statistics Time-based statistics

#### Event list

Display statistics about events by date or time of day. This feature makes it easy to discover power supply anomalies that occur at particular times of day or on particular days of the week.

Click the event statistics bar graph to display the event list.

#### ITIC curve

Perform ITIC (CBEMA) curve analyses (using tolerance curves), which are used by power quality management standards in the U.S. This feature lets you display the event duration and worst values for voltage swells, voltage dips, and interruptions.

Example ITIC curve screen

#### Trend graphs

Display voltage, current, frequency, harmonics, unbalance factor, power, energy, and other data as a time series. Set the display range as desired on the screen and output reports with the shown data. PQ ONE can generate a demand display for the PQ3198, even though that model does not include demand measurement.

Choose the measurement parameter, channel, or max./min./avg. value

#### Event details

Analyze 200 ms event waveforms, including waveforms, harmonics, vector, and numerical displays. You can also display 30 sec. event fluctuation data, transient waveforms, high-order harmonic waveforms, high-order harmonic frequency analysis data'1, and 11 sec. waveforms preceding events'2.
\*1: PQ3198 only. \*2: PQ3100 only.

Example voltage dip screen (30 sec. event fluctuation data)

#### Peak level display

Display a bar graph showing peak values during the voltage harmonic or current harmonic trend display interval. You can check average peak and maximum peak measured values for the period of time selected with the cursor to the right of the graph.

Peak level detection interval

Average peak and

#### High-order harmonics and frequency analysis display\*

Display high-order harmonic event waveforms (2 to 80 kHz) and associated frequency analysis data. By displaying the frequency analysis, you can determine the frequency band in which noise is occurring. \*PQ3198 only.

Example high-order harmonics and frequency analysis screen

#### Statistics display function

Present statistical data for voltage, current, frequency, harmonics, flicker and other parameters on the Statistics screen. You can also see the maximum and minimum (with time of occurrence). average, 5%, 50%, or 95% of the value (default values, user settable) of any selected parameter.

Example frequency screen

#### EN 50160 judgment function

Evaluate whether data complies with the EN 50160 standard by analyzing it and generating a judgment based on voltage fluctuations during the trend interval. You can also customize the judgment criteria and parameters.

Display detailed settings and judgment results

#### Report creation

Automatically generate reports in Microsoft Word\* by simply selecting the necessary data categories. Add comments as required.

\*Microsoft Word is a product of

parameters

Output a report with only the

#### CSV conversion and PQDIF output function

Output CSV and PQDIF format files for the parameters you choose. PQDIF format files can also be uploaded to the software.

PQDIF output settings screen

#### Compute TDD (Total Demand Distortion) based on the IEEE519 standard

Calculate TDD using PQ ONE.

$$TDD_I = \sqrt{I_2^2 \! + \! I_3^2 + \ldots \! + \! I_{49}^2 \! + \! I_{50}^2} \ / \ I_L$$
  $I_L$ : Maximum current demand (configure in PQ ONE)

#### Display language

Choose from English, German, French, Italian, Spanish, Turkish, Japanese, Simplified Chinese, Traditional Chinese, and Korean.

Choose "Automatic" to use the Windows language.

#### Other functionality

#### LAN remote control function

The application displays a virtual instrument and allows you to control it directly with the mouse. You can also easily change instrument settings and control the instrument, for example to start and stop measurement.

#### LAN automatic file download function

This function lets you acquire data in real time on a PC, including data created when the instrument's trigger is activated and measurement files that are automatically generated on a daily basis. Example uses include capturing abnormal phenomena with an instrument installed in the field and automatically acquiring daily power consumption data on a PC.

# Simple comparison chart

#### PQ3198 features

The PQ3198 offers an extensive range of event parameters. This model is ideal for use in troubleshootingrelated measurement since it can capture a variety of power supply anomalies. Additionally, it can measure power and efficiency across two circuits carrying different voltages (3-phase and DC, etc.).

#### PQ3100 features

The PQ3100 offers the QUICK SET function, which makes it easy to generate reliable measurements. Additionally, it can record 11 sec. event waveforms, yielding extended waveforms when anomalies occur. It can also be used in applications such as load rejection testing of solar power systems.

measurement	Recording interval times	1 sec. to 2 hours	200 ms/600 ms/1 sec. to 2 hours		
Setup assistan	ce	Simplified setup function	QUICK SET (navigation-style assistance from connecting the instrument to the start of recording)		
Battery operation	on	3 hours	8 hours		
Battery operation					

#### **Specifications**

The following specifications apply when the PQ3198/PQ3100 is set to a measurement frequency of 50/60 Hz. For more detailed specifications, including for when the PQ3198 is set to 400 Hz, please download the user manual from the HIOKI website.

	PQ3	198		PQ3100	
Number of channels	Voltage: 4 / Current: 4				
Input terminal type	Voltage: Plug-in terminals (safety tern	, :			
Connections	Any of the following + additional input t	1-phase/3-wire	3-phase/3-wire/2 3-phase/3-wire/3 *PQ3100 only 3-phase/4-wire		
Input resistance	Voltage inputs: 4 MΩ / Current inputs		Voltage inputs: 5 MΩ / Curre	ent inputs: 200 kΩ	
Maximum input voltage	Voltage inputs: 1000 V AC, ±600 V D	· · · · · · · · · · · · · · · · · · ·	Voltage inputs: 1000 V AC/DC, 2200 Vpeak		
Maximum rated terminal- to-ground voltage			1000 V AC (CAT III) or 600 V AC (CAT IV) with an expected transient overvoltage of 8000 V		
Sampling frequency	MHz		200 kHz for all parameters		
A/D converter resolution	bits		16 bits  Voltage: 2 V to 1300 V / Current: 0.4% to 130% of range		
Display range	Voltage: 0.48 V to 780 V / Current: 0.9  Power: 0.0% to 130% of range  Parameters other than above: 0% to		voltage: 2 v to 1300 v / Curl	ent: 0.4% to 130% of range	
Effective measurement	Voltage: 10 V to 780 V AC, peak of ±		Voltage: 10 V to 1000 V AC	peak of ±2200 V / 5 V to 1000 V DC	
ranges	Current: 1% to 120% of range, peak of Power: 0.15% to 130% of range (When voltage and current both fall with	of ±400% of range	Current: 5% to 120% of range Power: 5% to 120% of range	je, peak of ±400% of range

Recording settings	PQ3198	PQ3100
Recording interval	1/3/15/30 sec., 1/5/10/15/30 min., 1/2 hr.,	200/600 ms, 1/2/5/10/15/30 sec., 1/2/5/10/15/30 min., 1/2 hr., 150/180
	150 (50 Hz)/180 (60 Hz)/1200 (400 Hz) cycle	cycle "When set to 200/600 ms, harmonic data saving (except total harmonic distortion and K factor), event recording, and copy key operation durin recording are not available.
Saving of screenshots	Off/On The display screen is saved as a BMP file for each recording interval. Mir	
Folder/file names	Not user-configurable	Set to either automatic or user-specified (5 single-byte characters).
Event specifications		
Event detection method	The detection method for measured values for each event is noted in the	measurement specifications.
	External events: Events are detected by detecting a signal input to the EV Manual events: Events are detected based on operation of the MANUAL	
Synchronized saving of	Event waveforms: A 200 ms instantaneous waveform is recorded when	Event waveforms: A 200 ms instantaneous waveform is recorded when
events	an event occurs.	an event occurs.  Transient waveform: Instantaneous waveforms are recorded for 1 ms
	Transient waveform: Instantaneous waveforms are recorded for 2 ms before the transient voltage waveform detection point and for 2 ms after the detection point.  Fluctuation data: RMS value fluctuation data is recorded every half-wave for the equivalent of 0.5 sec. before the event occurs and 29.5 sec. after the event occurs.  High-order harmonic waveform: A 40 ms instantaneous waveform is recorded when a high-order harmonic event occurs.	before the transient voltage waveform detection point and 2 ms after the detection point.
Event cettings	event occurs.	
Event settings  Event hysteresis	0% to 100%	
Timer event count	Off, 1/5/10/30 min., 1/2 hr.	Off, 1/2/5/10/15/30 min., 1/2 hr.
	Events are generated at the selected interval.	Events are generated at the selected interval.
Waveforms before events	2 waves	Off (0 sec.) / 200 ms / 1 sec. The time for which to record instantaneous waveforms before events occur can be set.
Waveforms after events	Successive events: Off/1/2/3/4/5 The set number of events is repeated each time an event occurs.	Off (0 sec.)/200 ms/400 ms/1 sec./5 sec./10 sec. The time for which to record instantaneous waveforms after events occan be set.
Other functionality		
Copying of screenshots	Copy using the COPY key; results are saved to the SD card. Data formation	at: Compressed BMP
Removal of SD card while recording data	Not supported	A messages is displayed if the user pressed the F key on the FILE screen while recording with a recording interval of 2 sec. or greater; the SD card can be removed once message is reviewed.

Current range and combined amplitude accuracy (45 to 66 Hz)	Current range Combined accuracy 5.0000 A 1.1% rdg. + 0.16% f.s. 500.00 mA 1.1% rdg. + 0.7% f.s. 50.000 mA 1.1% rdg. + 6.1% f.s. [*2]					
Phase accuracy (45 to 66 Hz)	Within ±3°					
Frequency band	40 Hz to 5 kHz (±3.0% rdg. ±0.1% f.s.)					
Residual current characteristics	5 mA or less (for a pair of round-trip wires carrying 100 A)					
External magnetic field effects	5 mA equivalent, max. 7.5 mA (400 A/m, 50/60 Hz)					
Dimensions / weight / cord length	74 mm (2.91 in.) (W) × 145 mm (5.71 in.) (H) × 42 mm (1.65 in.) (D) / 340 g / 2.5 m (8.20 ft.)					

#### Option for connecting legacy current sensor models

CONVERSION CABLE L9910

Output connector conversion: BNC → PL 14

Use by connecting to one of the following legacy sensor models:

CLAMP ON SENSOR 9694/9660/9661/9669

AC FLEXIBLE CURRENT SENSOR CT9667-01/CT9667-02/CT9667-03 \*Conversion cable does not supply power to the sensor. CLAMP ON LEAK SENSOR 9657-10/9675

#### **Current sensor options**

**EXTENSION CABLE L0220-01** 2 m (6.56 ft.)

**EXTENSION CABLE L0220-02** 5 m (16.50 ft.)

**EXTENSION CABLE L0220-03** 10 m (32.81 ft.)

#### Voltage measurement options

HIOKI provides quotations for voltage cord extensions, terminal connector conversions, and other options on a case-by-case basis. Please contact your HIOKI distributor for details.

MAGNETIC ADAPTER 9804-01

Alternative tip for the L1000 series voltage cords, red ×1,  $\phi$ 11 mm (0.43 in)

MAGNETIC ADAPTER 9804-02

Alternative tip for the L1000 series voltage cords, black ×1, φ11 mm (0.43 in)

GRABBER CLIP L9243

Alternative tips for the L1000 series voltage cords

OUTLET TEST LEAD L1020

For Japan (3-prong, P/N/E), 2 m (6.56 ft) length.

\*Please contact HIOKI for cords for use in countries other than Japan.

#### Interfaces

SD MEMORY CARD 2GB Z4001

proper operation is not guaranteed.

2 GB capacity

SD MEMORY CARD Z4003

8 GB capacity

9637

9 pin - 9 pin, cross, 1.8 m (5.91 ft) length

LAN CABLE 9642 Straight Ethernet cable, supplied with straight to cross conversion adapter, 5 m (16.41 ft) length

#### **Magnetic straps**

MAGNETIC STRAP Z5004

MAGNETIC STRAP Z5020 Extra strength

#### Carrying cases and waterproof boxes

About SD memory cards Be sure to use genuine HIOKI SD memory cards with

HIOKI instruments. Use of other SD memory cards may

prevent data from being properly saved or loaded as

**CARRYING CASE** C1009

Bag type, Includes compartment for options

CARRYING CASE C1001

Soft type, Includes compartment for options

**CARRYING CASE** C1002

Hard trunk type, Includes compartment for options

Waterproof box For outdoor installation IP65

#### PQ3198 options

#### WIRING ADAPTER PW9000

When three-phase 3-wire connection, the voltage cord to be connected can be reduced from 6 to 3

#### WIRING ADAPTER PW9001

When three-phase 4-wire connection, the voltage cord to be connected can be reduced from 6 to 4

#### PATCH CORD L1021-01

Banana branch-banana, Red: 1, 0.5 m (1.64 ft) length, for branching from the L9438s or L1000s, CAT IV 600 V, CAT III 1000 V

#### PATCH CORD L1021-02

Banana branch-banana, Black: 1, 0.5 m (1.64 ft) length, for branching from the L9438s or L1000s, CAT IV 600 V, CAT III 1000 V

GPS BOX PW9005

To synchronize the PQ3198 / PW3198 clock to UTC

#### Standard accessories (also available for separate purchase)

#### Comes with the PQ3198

VOLTAGE CORD L1000 Red/Yellow/Blue/Gray each 1, Black 4, 3m (9.84ft) length, Alligator clip ×8

NiMH, Charges while installed in the main unit
